	Examiner Belix M. Ortiz	Art Unit 2164	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.
2. Claim 1 recites the limitation "the remote" in line 1. There is insufficient antecedent basis for this limitation in the claim.
3. Regarding claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being dependent from rejected independent claim 1.
4. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, because of the following informalities: claim 2 does not have a period at the end of the sentence.

Appropriate corrections are required.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application

for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Kim et al. (U.S. pub. 2004/0139483).

As to claim 1, Kim et al. teaches a system for the remote authoring of content (see abstract), comprising:

a plurality of content files (see abstract; figure 2, character 300; and paragraph 2);

and

an authoring system storing the plurality of content files (see paragraph 20),

comprising;

an identification system to identify the plurality of content files (see paragraph 40);

a relation system to relate related content files (see paragraphs 4 and 41);

a query system to request content files from a server (see paragraphs 20 and 23);

a reference database to store information about the plurality of content files (see figure 3, character s120 and paragraph 41);

a collection system to convert the plurality of content files into at least one collection file (see paragraph 40);

a conversion module to convert the at least one collection file into a master copy, wherein the master copy is in one of a plurality of formats (see abstract and paragraphs 12-13); and

a URL configuration system to identify a URL entered by a user into the at least one collection file and to communicate with a redirect server to activate the URL (see claim 3 and paragraph 20).

As to claim 2, Kim et al. teaches the system further comprising a remote workstation for a user to access the authoring system (see paragraphs 2, 8, and 47).

As to claim 3, Kim et al. teaches a method of remotely authoring content (see abstract), comprising:

transmitting a plurality of content files in various formats to an authoring system (see abstract; figure 2; and paragraph 2);

identifying, by the authoring system, the plurality of content files (see paragraph 40);

relating, by the authoring system, the plurality of content files (see paragraphs 4 and 41);

storing the related content files together (see figure 3, character s120 and paragraph 41);

querying a server for additional content files (see paragraphs 20 and 23);

Art Unit: 2164

populating a reference database with information related to the plurality of content files (see figure 3, character s120 and paragraph 41);

creating, by a user, at least one collection file including content files (see paragraph 40);

producing, by the authoring system, a master copy of the collection file in a format specified by the user (see abstract and paragraphs 12-13);

determining if a URL is in the collection file (see claim 3 and paragraph 20);

communicating with a redirect server to activate the URL (see claim 3 and paragraph 20).
